

Transform How Your Institution Manages Evidence Synthesis

Streamline your institution's review workflows with Covidence, saving thousands of research hours while strengthening collaboration, consistency, and research quality.

The Challenge

Universities, research institutions, and hospitals face growing pressure to demonstrate impact, support researchers, and streamline workflows, all while maintaining methodological rigor.

But evidence synthesis can be slow, fragmented, and hard to coordinate:

- Teams rely on multiple tools or spreadsheets to manage references, screening, and data extraction
- Collaboration across departments and campuses, as well as external collaboration across organisations and countries is hard to streamline
- Libraries and research offices struggle to provide consistent support or visibility into review activity

The result? Lost time, duplicated effort, and missed opportunities for research impact.

How Institutions Are Evolving

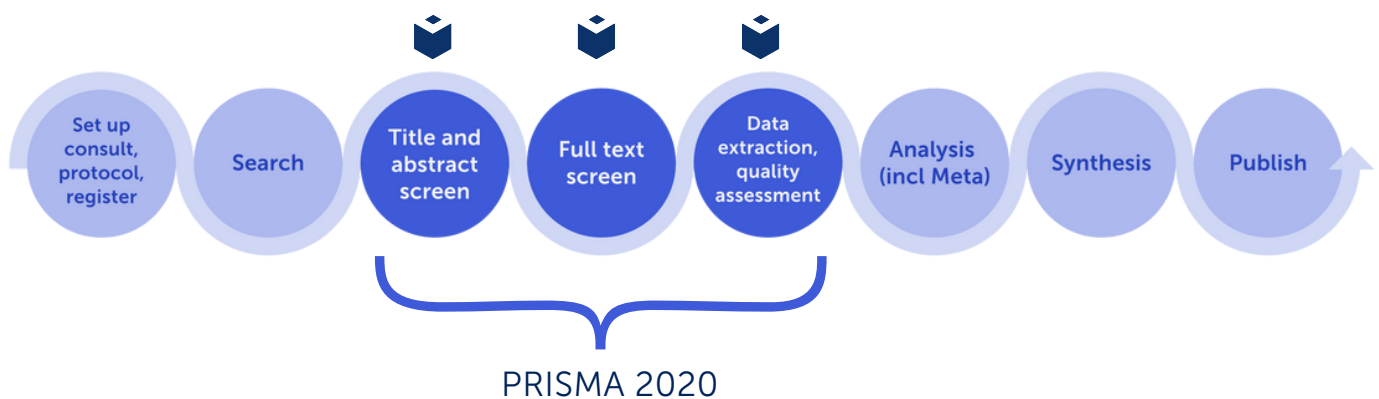

Leading institutions are rethinking how they enable evidence synthesis. By centralizing review management they can:

- Reduce administrative burden and accelerate publication timelines
- Gain visibility into research activity across the institution
- Create a single, shared repository for all review types
- Strengthen training, teaching, and reporting standards
- Empower every researcher, from students to senior faculty, to produce high quality research

How Covidence Helps

Trusted by over **650,000 researchers and 450 leading institutions**, Covidence is the world's leading evidence synthesis platform supporting systematic, literature, scoping, rapid, and other review types. **As an independent not-for-profit organization**, Covidence reinvests every dollar into improving tools, training, and community support for researchers worldwide.

Our cloud-based platform simplifies and accelerates the production and management of reviews, helping institutions deliver research that is faster, higher quality, more accurate, and more impactful.

We are not just software, we help institutions build strong research culture.

Behind the platform is a team of evidence synthesis experts who bring years of real-world review experience and deliver practical training to help your teams strengthen research capability.

Covidence is a trusted partner and the official platform for Cochrane authors and used by more than **70% of the world's top ranked universities.***

For institutions, Covidence delivers:

Efficiency at scale	Streamlines critical stages of the review process, from import to data extraction, saving time and reducing complexity. Across our institutional partners, researchers create 200+ projects each year , saving an estimated 14,400 hours of effort per institution . That's the equivalent of at least one full-time staff member and an average ROI exceeding 10x .
Building research capability	Helps institutions train and support more researchers in review methodology, building long-term institutional skill and confidence in evidence-based research.
Seamless collaboration	Enables real-time teamwork across disciplines, campuses, and countries with secure cloud-based access. On average, institutions see collaboration double (2x increase) across teams and departments.
Research excellence	Covidence follows globally recognized reporting standards (including PRISMA), helping make research methods transparent, consistent, and more likely to be published, strengthening institutional research quality and global rankings.
Institution-wide value	Gives faculty, students, and staff equal access under one institutional license, eliminating the need for personal accounts or improvised tools.

Covidence Solves Common Pain Points

Your Challenge	Covidence Solution
Fragmented workflows and duplicate effort	One centralized workspace for all reviews
Limited collaboration and visibility	Shared, asynchronous projects, role-based access, and audit trails
Training and support stretched thin	Built-in guides, resources, training, teaching tools, and community support
Need to show measurable research value	Institutional research insights and reporting dashboards.

Built for Your Research Ecosystem

Covidence is more than just a tool. It integrates seamlessly into your institution's existing research infrastructure, empowering your organization to teach, support, and facilitate high-quality reviews.

Empower and enable your researchers

Make it simple and straightforward for students and researchers to produce high-quality research. Covidence supports both library-led and faculty-driven adoption models, underpinned by **Covidence Academy, training, resources**, and **live webinars** that develop capability across all review types.

Effortless roll-out

Our out-of-the-box solution works with your preferred reference managers and citation tools. With **Single Sign-On (SSO)** and quick provisioning, your researchers get fast access without IT integration headaches. You'll be up and running quickly with a dedicated Academic Success Manager.

Global Community Support Team

Our 24/7 support team does more than troubleshoot. Your users connect to a community of highly experienced systematic reviewers and Covidence platform experts.

Customizable training

Our bespoke training programs ensure your users receive hands-on support, access to in-person and virtual training, and live webinars on both methodology and platform use from our team of experts.

IP-free white-labeled learning resources

Your institution can co-brand or embed **Covidence Academy content and eBooks**, including current and future resources, as part of your institutional teaching and professional development programs.

New! Research Insights Dashboard

Gain a clear view of how your organization's review activity and collaboration translate into measurable research impact:

- **Efficiency gains** – See where time is saved and workflows are streamlined
- **Adoption & collaboration** – Track engagement across teams and institutions
- **Research reach & reputation** – Demonstrate the influence of your research outputs

Partner With Us

Covidence partners with universities, hospitals, and research institutions around the world to build sustainable, evidence-based research ecosystems.
